Great read even thought it was for school.

By Peter Parker

I took a Social Psych course and it was actually really fun. I was a Computer Science student about 2 years ago. I took this class about 3 years ago and I still own the book and recommend my friends to read it. It's quite eye opening to learn what is socially constructed in your mind vs what is real in the context of yourself. I like to say this book changed my mind and my perspective on a lot of things in my life because it made me realize how certain external influences and social interactions construct the way I think and behave vs how I really want to think and behave. So I'm more of an individual and have a better sense of how I can decided who I want to be.
